Rope Access Trade Solutions
is a specialist trades company at the
forefront of industry and an ever
changing work place.

www.rat-solutions.co.uk

Rope Access Trade Solutions offer an alternative means of accessing the work-site, by using rope access and working at height techniques which saves on time, is safer, greener and more cost effective. Also by using Industrial Rope Access our fully trained technicians are able to gain access to the workplace which allows them to complete a variety of tasks in a quick yet safe manner with minimum disruption to the surrounding environment.

We specialise in all aspects of trade's work via rope access techniques and also offer a wealth of experience throughout heavy engineering, structural steel work, fabrication and pipework systems both onshore and offshore.

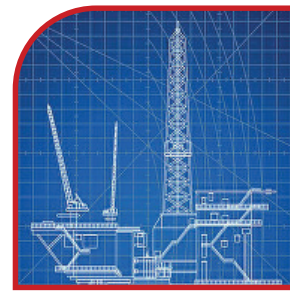

All work carried out by Rope Access Trade Solutions is carried out and completed by our time served tradesman in a professional and efficient manner and to the highest safety standards. All works are carried out within our Integrated Management System (IMS) which is UKAS certified, and all of our Rope Access work is carried out within IRATA guidelines.

Other advantages of using Rope Access Trade Solutions are in the safety and speed which workers can get to and from difficult locations then carry out their work, often with minimal impact on other operations and the nearby area. Another major benefit is that the combination of the total man-hours and the level of risk for a particular task (man-at-risk hours) is often reduced when compared with other means of access and their associated risks and costs.

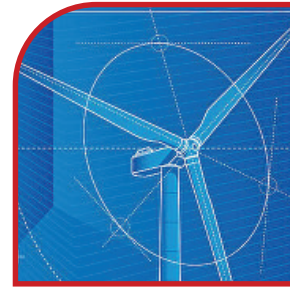

The primary objective when using rope access methods is to plan, manage and carry out the work with minimal accidents, incidents or dangerous occurrences, i.e. to ensure a safe system of work is maintained at all times, and with no damage to property or harm to the environment which we pride ourselves on here at Rope Access Trade Solutions.

Rope Access and Trade Solutions we offer:-

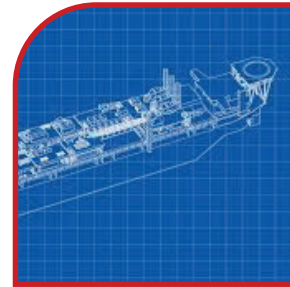

- Fabrication and Coded Welding to all standards (ASME, AWS, BS EN, ISO) (Lloyds and DNV)
